Battery Charge/Discharge Test System for <50Watt power application

The battery test system, **WBCS3000S**, is designed for general practices when researching materials to optimize battery performance.

The **WBCS3000S** can be configured with custom specification not exceeding its maximum power 50Watt. The accuracy for current and voltage on these channels is $\pm 0.02\%$ FSR. Up to 8 independent channels can be installed per substation and extra channels can be added up to a maximum of 128 channels.

The **WBCS3000S** does not only support various techniques for battery studies, but also carries out electrochemical techniques such as corrosion test techniques, electro-analytical techniques, cyclic voltammetry, chronoamperometry, and potentiometry, etc. and this feature allows user to perform general Echem experiments.

The Smart Interface(SI) software is a convenient and powerful tool allowing:

- easily making schedule files by using schedule editor
- selecting pre-defined techniques
- classifying/grouping channels by user's purpose
- monitoring detailed test data
- providing general/cycle graph format
- converting the data to ASCII or excel format

The **WBCS3000S** can communicate with the computer by the way of a Local Area Network(LAN).
